

Plasma & Tissue Proteins

Human Plasma Proteins

α 1-Acid Glycoprotein	Immunoglobulin G, Intact
Albumin	Immunoglobulin G, Fc Fragment
α 1-Antichymotrypsin (ACT)	Immunoglobulin M
Antithrombin III	α 2-Macroglobulin
α 1-Antitrypsin	β 2-Microglobulin
C-Reactive Protein (CRP)	Retinol Binding Protein
Immunoglobulin A	Sex Hormone Binding Globulin
Immunoglobulin E	Thyroxine Binding Globulin

Human Tissue Proteins

Cathepsin D	Neuron Specific Enolase
Ferritin, Liver	Thyroglobulin
Ferritin, Spleen	Trypsin
Keratin, Epidermal	

Antibodies

Monoclonal and polyclonal antibodies are available to many of the above human proteins; please inquire.

PURIFIED HUMAN PROTEINS

Scripps scientists have worked diligently to develop purification methods for human proteins that maximize immunological reactivity. As a result, Scripps Laboratories consistently produces high purity human proteins that are exceedingly stable and that perform well in antibody-based assays.

If you're looking for a consistent supplier of purified human proteins for immunoassay development and production, look to Scripps. We've been doing it for over 20 years!

ANTIBODIES

Scripps has bulk quantities of monoclonal and polyclonal antibodies to many of the proteins listed to the left. Most of these projects are mature and producing large volumes of antibody.

The monoclonals are ion-exchange or protein A purified, and the polyclonals are purified via immunoaffinity or ion-exchange chromatography.
