

TECHNICAL PRODUCT SUMMARY

Human Albumin

PROTEINS

Cat. No.	Description	Source	Purity
A0213	Albumin	Human Plasma or Serum	≥95%

ANTIBODIES

Cat. No.	Description	Clone	Subclass
MA027	Albumin Monoclonal	CA002	IgG1

Intended Use: All Products are for Research Use or Further Manufacture Only. Not for Use in Diagnostic Procedures.

Microalbuminuria

Elevated levels of urinary albumin excretion (30-300 mg/day) are indicative of renal dysfunction. This clinical condition is called microalbuminuria, and in diabetes mellitus it is predictive of future development of end-stage renal disease and/or cardiovascular disease.

Rapid tests for microalbuminuria have been demonstrated useful in screening procedures for diabetes mellitus, identifying those patients at risk for future renal and/or cardiac complications. These patients, once identified, are candidates for early therapeutic intervention, thereby reducing diabetes-related morbidity and mortality.
